

SPACE CYBERSECURITY WEEKLY WATCH

W8

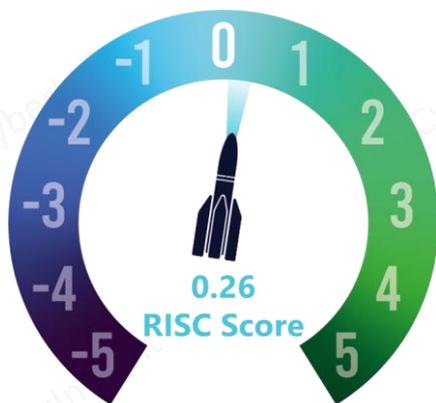

February 17 – 23, 2026

Timeframe: Weekly
of articles identified: 20
Est. time to read: 45 minutes

Articles, company's communications, whitepapers, academic works, podcast, and sources not to be missed on the topic of space cybersecurity over a specified timeframe.

- **GEOPOLITICS**
- **TECHNOLOGY**
- **MARKET & COMPETITION**
- **REGULATION**
- **TRAINING & EDUCATION**
- **THREAT INTELLIGENCE**
- ★ **IMPORTANT NEWS**

RISC Score Assessment

↓ The RISC score for this watch is 0.26, down from last week, due to a poor Market and Geopolitical week.

Overview & Resilience Index for Space Cybersecurity (RISC)

RISC Score evolution in 2026

This week, the **French Space Command** launched the sixth edition of its **SparteX exercise** in Toulouse, aiming to demonstrate operational credibility in space as a new “conflict environment.” General Vincent Chusseau emphasized the need to prepare for emerging threats in orbit, reflecting Europe’s commitment to securing its space assets amid rising global tensions. On the regulatory side, **ENISA published its Cybersecurity Exercise Methodology**, providing a standardized framework for designing, conducting, and evaluating cybersecurity exercises across the EU. On the market front, Spain’s **Indra signed strategic agreements with Italy’s Elt Group and Leonardo** to strengthen cooperation in multi-domain defense, including space and cybersecurity. The partnerships aim to expand their joint capabilities in Europe, NATO, and high-potential markets, reinforcing Europe’s sovereign defense industry. On the threat intel front, French aerospace giant **Safran suffered a significant data breach**, with a threat actor leaking over 1m internal records on a hacking forum. On the technological side, **Thales Alenia Space delivered the first Celeste navigation satellite for ESA’s LEO-PNT mission**. Designed to operate alongside Galileo, Celeste will provide centimeter-level geolocation accuracy and enhanced resilience against jamming and spoofing, marking a major step forward for Europe’s sovereign navigation capabilities. Lastly, the **U.S. Space Force’s SWORD platform** emerged as a key tool for maintaining space superiority. This cloud-based, synthetic training environment simulates contested space operations—including electronic warfare and cyber effects—enabling realistic, decentralized training for guardians without relying on live assets.

GEO POLITICS

USA India Breakthrough: Strategic Post-Event Defense & Space Plan, 2025-2030, 2025, America First Strategy

In Toulouse, the French army is getting to grips with space, the new "conflict zone," in the SparteX exercise

The French Space Command is conducting the sixth edition of its annual space exercise in Toulouse in order to "demonstrate our operational credibility" in this new "conflict environment," General Vincent Chusseau, head of the CDE, told reporters on Wednesday. **#SparteX #ConflictEnvironment**

ENISA publishes Cybersecurity Exercise Methodology to guide and standardize EU cybersecurity exercises

The European Union Agency for Cybersecurity (ENISA) published its Cybersecurity Exercise Methodology, offering organizations comprehensive guidance in designing, conducting, and evaluating cybersecurity exercises from start to finish. The methodology presents an end-to-end theoretical framework that ensures the right stakeholders and profiles are involved at the appropriate stages. It draws on lessons learned, industry best practices, and cybersecurity expertise and has been designed to be used alongside a support toolkit that includes templates and guidance materials to help planners organize effective exercises. **#ENISA #ExerciseMethodology**

Indra signs cooperation agreements with Italian companies Elt Group and Leonardo

The Spanish company and Italy's Elt Group have signed a collaboration agreement aimed at strengthening their industrial and technological cooperation in multi-domain defence, establishing a common framework for developing and promoting collaboration in three key areas: the land domain, the space domain and unmanned aerial vehicles. Indra Group and Leonardo have also signed a Memorandum of Understanding (MoU) to reinforce their cooperation in cyber defence, with the aim of jointly identifying and expanding their international reach within Europe, NATO and in other high-potential markets. **#Collaboration #SpaceDefense**

THREAT INTELLIGENCE

Continuously operating orbital on-board defense system without gaps

Continuously operating orbital on-board defense system without gaps. The system is designed to provide continuous protection against threats in the space domain. It is a key element of a comprehensive space defense strategy. The system is designed to provide continuous protection against threats in the space domain. It is a key element of a comprehensive space defense strategy.

Why Insider Threats May Make Satellite Tracking Significantly Harder

Why Insider Threats May Make Satellite Tracking Significantly Harder. Insider threats are a significant concern for satellite tracking. They can provide valuable information to adversaries, making tracking much more difficult. This is a key element of a comprehensive space defense strategy.

★ Safran SA data breach exposes aerospace supply chain records

Safran S.A., a French multinational aerospace and defense company, has allegedly been compromised after a threat actor posted its database and internal files on a popular hacking forum. The leak purportedly impacts 1,030,031 lines of internal records. #DataLeak #Safran

★ Space: Thales Alenia Space delivers the first European Celeste navigation satellite

The first in-orbit demonstration satellite (IOD-2) of the European Space Agency's (ESA) Celeste mission (formerly known as LEO-PNT) has officially begun its journey ahead of launch. This program aims to strengthen resilience and exponentially improve the performance of existing navigation services. Built on a multi-orbit approach, it will operate alongside Galileo and other satellite navigation systems to offer centimeter-level geolocation accuracy, increased robustness, and high resistance to jamming and spoofing. #Celeste #ESA

TRAINING & EDUCATION

SWORD training platform key to US space superiority, program head says

SWORD, the Space Force's primary synthetic training environment, is a cloud-enabled, digital simulation platform designed to replicate contested space operations, including orbital dynamics, electronic warfare, cyber effects and adversary tactics. It allows guardians to train in realistic scenarios without relying solely on live, on-orbit assets or centralized facilities. **#TrainingPlatform #Exercise**

Key Messages at the Munich Cyber Security Conference 2025

The Munich Cyber Security Conference 2025 centered on the importance of cybersecurity for nations from a national perspective and a new wave of geopolitical tensions, security, and military risks. Through the discussion, participants identified key trends and challenges affecting nations globally in the face of increasingly complex and interconnected digital environments. **#Munich2025**

Cybersecurity of Quantum Key Distribution Implementations

Practical implementations of quantum key distribution (QKD) often deviate from the theoretical protocols, opening the implementations to various attacks even when the underlying code and hardware are secure. We present our analysis and our methodology for system vulnerability, starting from usage of vulnerabilities, attack vectors, and system-level security considerations for implementations. **#Page 488**

A Synthetic Space Training Environment of Space Defense Operations Task Table

Space operations of countries, such as the United States, are a cornerstone of the global power structure. This paper presents a synthetic space training environment for space defense operations. **#SpaceOperations**
