Overview & Resilience Index for Space Cybersecurity (RISC)

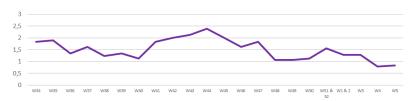

RISC Score evolution in 2024 and 2025

The RISC score for this watch is 0.84, a small increase from last week. This score remains low, especially due to high geological uncertainty and strong threats.

This week, CyberInflight was proud to participate in an EU Space ISAC panel at the 17th European Space Conference. Speakers discussed the crucial aspects of ISACs for gathering and sharing information on cyber-threats, ensuring critical infrastructure security, particularly in this political context. Meanwhile, on the geopolitical side, Russia has strongly criticized the USA for moving towards the weaponization of space under the directive of President Donald Trump. On the threat intel front, British engineering firm Smiths Group is working to restore systems after a cyberattack rendered them offline. The company has yet to disclose information on the hackers or the nature of the attack but claimed that the intruders gained unauthorized access to some of its systems. On the market side, the US Space Force is bolstering satellite cybersecurity with "MeshSatNet" to protect critical infrastructure from evolving threats. On the other side of the Atlantic, in Europe, the European Space Agency (ESA) will lead the space segment of the European Quantum Communication Infrastructure (EuroQCI), integrating quantum-secure communications into Europe's broader satellite network. On the regulation front, an article about the FAR CUI Rule proposed on Jan. 15, 2025, by the Department of Defense (DoD), General Services Administration, and NASA was published. Last but not least, West Virginia State University (WVSU) is leveraging strategic partnerships to enhance cybersecurity education and drive community impact. Join the conversation to understand WVSU's innovative program and explore how partnerships transform cybersecurity education and prepare the next **generation of professionals.**

CYBERINFLIGHT'S NEWS 🞉

CyberInflight participated in an EU Space ISAC panel at the 17th European Space Conference

Speakers discussed the crucial aspects of ISACs for gathering and sharing information on cyber-threats, ensuring the security of critical infrastructure, particularly in this political context. **#EUSpace #Conference**

REGULATION

FAR controlled unclassified information rule standardizes and extends cybersecurity requirements to all federal contractors

The FAR CUI Rule applies to contractors of all federal executive agencies and implements NARA's policies under 32 CFR part 2002, which codified a standardized approach to designating, handling, and safeguarding CUI. The proposed rule also introduces new procedures, including reporting and compliance obligations, and defines roles and responsibilities for both the government and contractors who use and handle CUI. **#FAR #USA**
