

SPACE CYBERSECURITY WEEKLY WATCH

Week 48

November 25 – December 1, 2025

Timeframe: Weekly
of articles identified: 37
Est. time to read: 70 minutes

Articles, company’s communications, whitepapers, academic works, podcast, and sources not to be missed on the topic of space cybersecurity over a specified timeframe.

- GEOPOLITICS
- TECHNOLOGY
- MARKET & COMPETITION
- REGULATION
- TRAINING & EDUCATION
- THREAT INTELLIGENCE
- ★ IMPORTANT NEWS

RISC Score Assessment

Overview & Resilience Index for Space Cybersecurity (RISC)

RISC Score evolution in 2025

↓ The RISC score for this watch is 1.17, down from last week. This change is due to fewer activities in regulation, technology, and the market than in previous weeks, while the threat intelligence front remains active.

On November 27, Florent Rizzo, the founder and CEO of CyberInflight, spoke in a space-focused roundtable at the Cybersecurity Business Convention (CBC) in Toulouse. The discussions addressed the evolving challenges of space cybersecurity, industry requirements, and the strategic importance of securing orbital infrastructures. Additionally, we released CyberInflight’s October Cyberdefense Monthly Watch, which provides a concise overview of the key developments that shaped October. This week, on the geopolitical front, European Space Agency secured a record €22bn budget at the conclusion of the two-day ministerial conference. The funding was a 32% increase from the €16.9bn ESA received at the previous ministerial in 2022. The regulation section highlights Eurospace’s position paper on the EU Space Act, which reflects the industry’s view that this initiative represents a significant step towards enhancing European leadership in space. On the technological front, the UK-backed SpeQtre satellite was successfully launched aboard SpaceX’s Transporter’15 mission. The pioneering nanosatellite aims to demonstrate ultra-secure quantum communications technology from orbit, a breakthrough that could shield the nation’s data from even the most sophisticated cyber-threats. Moreover, the market side focuses on the Canadian cybersecurity firm Dominant Information Solutions Canada (DISC), which brings skillset to ESA’s cybersecurity Makerspace Program. On the threat intelligence front, a new study from the Centre for Security Studies (CSS) at ETH Zürich, written by Clémence Poirier, examines how the space sector was targeted during the Gaza War, documenting a rise in cyber activity against organizations linked to space systems. Lastly, the training & education section proposes a podcast exploring what it really takes to scale secure space systems fast and without sacrificing quality. Experts delve into the rise of small-satellite architectures, the push for higher-volume production, and why cybersecurity must be integrated into hardware from the outset.

CYBERINFLIGHT'S NEWS

CyberInflight participated in a space cybersecurity roundtable at the Cybersecurity Business Convention

Florent Rizzo, founder and CEO at CyberInflight, participated in a space-focused roundtable during the Cybersecurity Business Convention (CBC) in Toulouse. The session brought together key actors of the Toulouse space ecosystem, including Julien Airaud, Stéphane Descous, and Anna Barraqué, under the moderation of Yohann Bauzil. Discussions addressed the evolving challenges of space cybersecurity, industry requirements, and the strategic importance of securing orbital infrastructures. **#CBC #Roundtable**

CyberInflight's October Cyberdefense Monthly Watch is live

October has been a busy month across the defense ecosystem: we saw heightened strategic competition, strengthened Russia–China cooperation, and the U.S. placing cyber and electronic warfare firmly at the top of its agenda. On the industry side, momentum accelerated around quantum security, next-gen EW systems, and secure military space infrastructure. Threat actors also continued to push boundaries with more cross-domain deception and a growing cyber–EW convergence. The edition provides a concise snapshot of the key shifts that shaped October.

US, UK, Germany, and Japan's National Space Strategies for securing space systems

The space domain is becoming a theater of conflict, with nations vying for dominance and control. The US, UK, Germany, and Japan have recently released their National Space Strategies, highlighting the importance of securing space systems and the potential for conflict in this domain. The strategies emphasize the need for international cooperation and the development of robust security measures to protect space assets and ensure the integrity of space-based services.

Russia launches classified military satellites

Russia has launched a series of classified military satellites, marking a significant step in its space capabilities. The satellites are designed for intelligence gathering and communication, and their launch demonstrates Russia's growing prowess in the space domain. The move is seen as a challenge to the US and other major space powers, highlighting the potential for a new arms race in space.

ESA raises more than \$22bn euros at ministerial

At a press conference at the conclusion of the two-day ministerial conference, ESA Director General Josef Aschbacher announced that ESA member states had agreed to provide €22.1bn (\$25.58bn) for the agency's programs. The funding was a 32% increase from the €16.9bn ESA received at the previous ministerial in 2022. "I think this message of Europe needing to catch up and to step up and literally elevate the future of Europe through space has been taken by our ministers very seriously", he said. **#ESA #Budget**

Strengthening EU border security: meeting of the Satellite-enabled Asset Tracking Demonstration Task Group

The Satellite-enabled Asset Tracking Demonstration Task Group (SATATD) met to discuss the challenges of border security and the potential for satellite-based solutions. The group is focused on developing a common framework for the use of satellite data in border management and security. The meeting highlighted the need for international cooperation and the development of robust security measures to protect border areas and ensure the integrity of border-based services.

Space-powered supremacy: how China's satellite systems strengthen its missile and hypersonic force

China's satellite systems are becoming a key component of its military capabilities, particularly in the context of missile and hypersonic force. The satellites provide critical intelligence and communication support, enabling China to maintain a strong presence in the space domain. The move is seen as a challenge to the US and other major space powers, highlighting the potential for a new arms race in space.

Chinese state firm sees military use for its new satellite

Chinese state firm sees military use for its new satellite. The firm, which is a subsidiary of the Chinese Academy of Space Technology, has developed a new satellite that it says will be used for military purposes. The satellite is designed to provide high-resolution imagery and intelligence gathering capabilities. It is expected to be launched in the near future.

REGULATION

Eurospace position paper on the “EU Space Act”

Eurospace's position paper on the EU Space Act highlights the industry's view that the initiative represents a constructive step toward strengthening European leadership in space. According to the paper, the EU-level framework could help curb internal market fragmentation by reducing discrepancies between national legislative requirements on safety and security. The document argues that a unified European approach would better support the sector's interests in international discussions. **#EUSpaceAct #PositionPaper**

The Commission has adopted a new satellite communication

The Commission has adopted a new satellite communication. The new regulation aims to improve the security and integrity of satellite communications and to ensure that satellite services are available in emergency situations. It also sets out the requirements for satellite operators to ensure the safety of their operations.

UK launches SpeQtre satellite in bold step toward ‘unhackable’ quantum communications

A new chapter in Britain's scientific and national security leadership began this week, as the UK-backed SpeQtre satellite successfully launched from California aboard SpaceX's Transporter-15 mission. The pioneering nanosatellite aims to demonstrate ultra-secure quantum communications technology from orbit, a breakthrough that could shield the nation's data from even the most sophisticated cyber-threats. Funded with £7m agreed by the former UK government, the project places Britain at the forefront of a global race to secure communications. **#UK #SpeQtre**

Dominant Information Solutions Canada (DISC) brings skillset to ESA's cybersecurity Makerspace program

Canadian cybersecurity firm Dominant Information Solutions Canada (DISC) is working on a new way to help protect satellites as part of a European Space Agency (ESA) program. The Ottawa-based company, which recently expanded its business on space security and satellite cyber defenses, is the first Canadian company participating in the program. It will be working alongside German space systems company OHB SE to create new methods and tools to help protect satellites from hacking and disruption by both non-state and state actors. **#DISC #MakerspaceProgram**

New report warns space sector faces rising cyber-threats amid modern conflicts

A new cyberdefense study from the Centre for Security Studies (CSS) at ETH Zürich, written by Clémence Poirier, examines how the space sector was targeted during the Gaza War, documenting a rise in cyber activity against organizations linked to space systems. The report identifies 237 cyber operations against the space sector in the context of the conflict. These operations were directed at a wide range of entities within the sector. **#GazaWar #Study**

Space monitoring satellite jamming is the threat to Space Intelligence and Europe's challenge of maintaining communications

Space is no longer just a frontier of technological frontier. As Europe's satellite and ground-based systems become more complex, the threat of satellite jamming is growing. This article explores the threat of satellite jamming and the security challenges it poses. It also discusses the importance of maintaining secure communications in space and the challenges of maintaining secure communications in space.

TRAINING & EDUCATION

Podcast: The vulnerability of global navigation satellite systems

In this episode of the CyberInflight podcast, we explore the vulnerability of global navigation satellite systems (GNSS) to cyberattacks. We discuss the critical role of GNSS in modern society and the potential consequences of a successful attack. We also explore the importance of maintaining secure communications in space and the challenges of maintaining secure communications in space.
